

1 Day Seminar

Sharjah Premises
17th December, 2012

Cyber Crimes & Internet threats against Banks

Overview

With every new data breach, revealed, or costly identity-theft case reported, customer confidence in the security of online banking erodes. This loss of confidence in online services can have a direct impact on the ability of financial institutions to reduce costs and increase efficiency through their online-banking channel. Today, financial institutions offering Internet-based and mobile-banking services face increasing pressure to provide enhanced customer protection against phishing, sophisticated malware, and other fraudulent activities.

EIBFS is looking into addressing the Threat of Cyber Crime against Banks and the challenges such threats pose to financial institutions, through organizing a 1 Day Seminar on: **"Cyber Crimes & Internet threats against Banks"**
